VALORA TECHNOLOGIES LAUNCHES NEW WEBSITE

Re-branded website focuses on company's new capabilities in Population Analysis, AutoCoding and ESI processing.

Burlington, MA – January 1, 2009 – Leading technology-based services firm, Valora Technologies, Inc., launched its new website, www.valoratech.com, today to highlight its capabilities in analyzing and classifying documents for litigation matters and records retention projects. With an all new look, easier navigation and rich topic-area content, Valora felt the change was necessary to provide its customers in the legal and records retention communities with better information about its capabilities and service offerings. With new features such as the "Request a Quote" and "Schedule a Webinar" forms, getting in touch with Valora for your specific needs has never been faster or easier.

The new website makes it easier to navigate to Valora's different news and event updates as well as learn about Valora's unique capabilities and services. The new e-Discovery section now includes detailed information about both SmartSelection™ processing and StraightThrough™ processing, both of which are part of Valora's revolutionary new approach to ESI Processing. Of course, the many options for Valora's award-winning, proprietary Document Coding (now including AutoCoding) are also explained in detail on the new site.

"One of our favorite new features," commented Sandra Serkes, CEO and co-founder of Valora Technologies, "is the Resource Center, which contains everything you need to know about Population Analysis and how it is revolutionizing e-Discovery and document review." Resource Center materials are prepared by Valora, other leading industry experts and the general press on

topics germane to large-scale document management, whether for litigation or records retention. In addition, Ms. Serkes and guest contributors maintain a monthly web log ("Blog") on the site, with observations and strategic insight on the future of document management.

About Valora

Valora Technologies, a leading technology-based services firm specializing in streamlining document analysis and classification for the legal review process and records retention, has analyzed, tagged and managed over 500 million electronic and paper documents for its clients. The company serves law firms, corporations, government agencies and litigation support providers throughout the world. Valora's services are used to reduce the cost, complexity and time associated with e-discovery, paper discovery and document review. More information can be found at: www.valoratech.com.
